- ▶ NEW Web Content Management: Intranet & Extranet with web publishing rules and access
- ▶ NEW Collaboration: Features project management and integration with the Office Suite

CASE STUDY

Going Global with World-Class System

A Midwest-based company services clients in an expanding global market, presenting new challenges with approval processing and workflow due to its hybrid paper-based and electronic system. The company needed to maintain a high level of service with a larger case load by increasing employee productivity and responsiveness.

To address these issues, the company's IT staff had to choose

between developing new custom applications themselves or deploying existing software that would satisfy the company's growing demands.

Microsoft Office SharePoint Server 2007 (MOSS) offered the capabilities they desired, and Horizons Consulting provided the expertise to help them implement it.

Horizons created a prototype global solution based upon extensive business

analysis, and employing new features of the latest SharePoint release. Horizons also performed the necessary performance, load testing, failover and recovery, scalability, and network analysis.

The new system includes highlights such as Data Transport, Task Management, Business Metrics, Reporting and Analysis, Status Tracking, and an intuitive, web-based interface.

Microsoft Products Used
